

# DUCKIES Yellow Paper

Duckies is the NFT and token-based reward platform, which features \$DUCKIES—a crypto reward token on EVM-compatible blockchains, designed for growing live and vibrant communities.

\$DUCKIES tokens are awarded to people for completing tasks set by the platform and inviting friends to grow their community, which can be exchanged for various digital goods, art, and exclusive NFTs (with super-powers!)

## Duckonomics

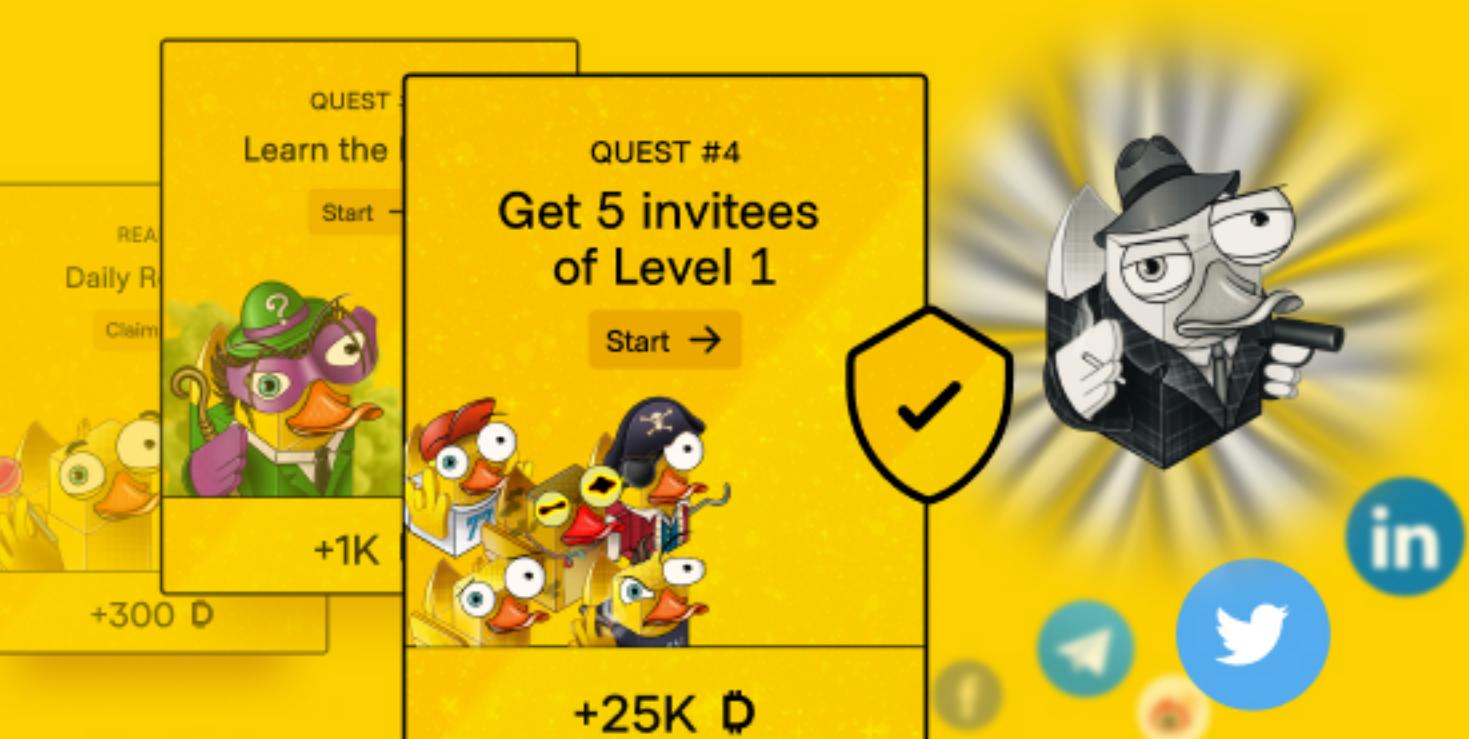

Target Supply	Networks	Emission
100 Billions per chain	Polygon, Ethereum, Binance Smart	Proof of Referral

## Marketing & Partnerships Allocation

Duckies growth marketing strategy is community calls and partnerships with other communities to have join quests, exclusive events, swapping options, unique proposals. Such tokens are subjected to a 2-year vesting period and halving.

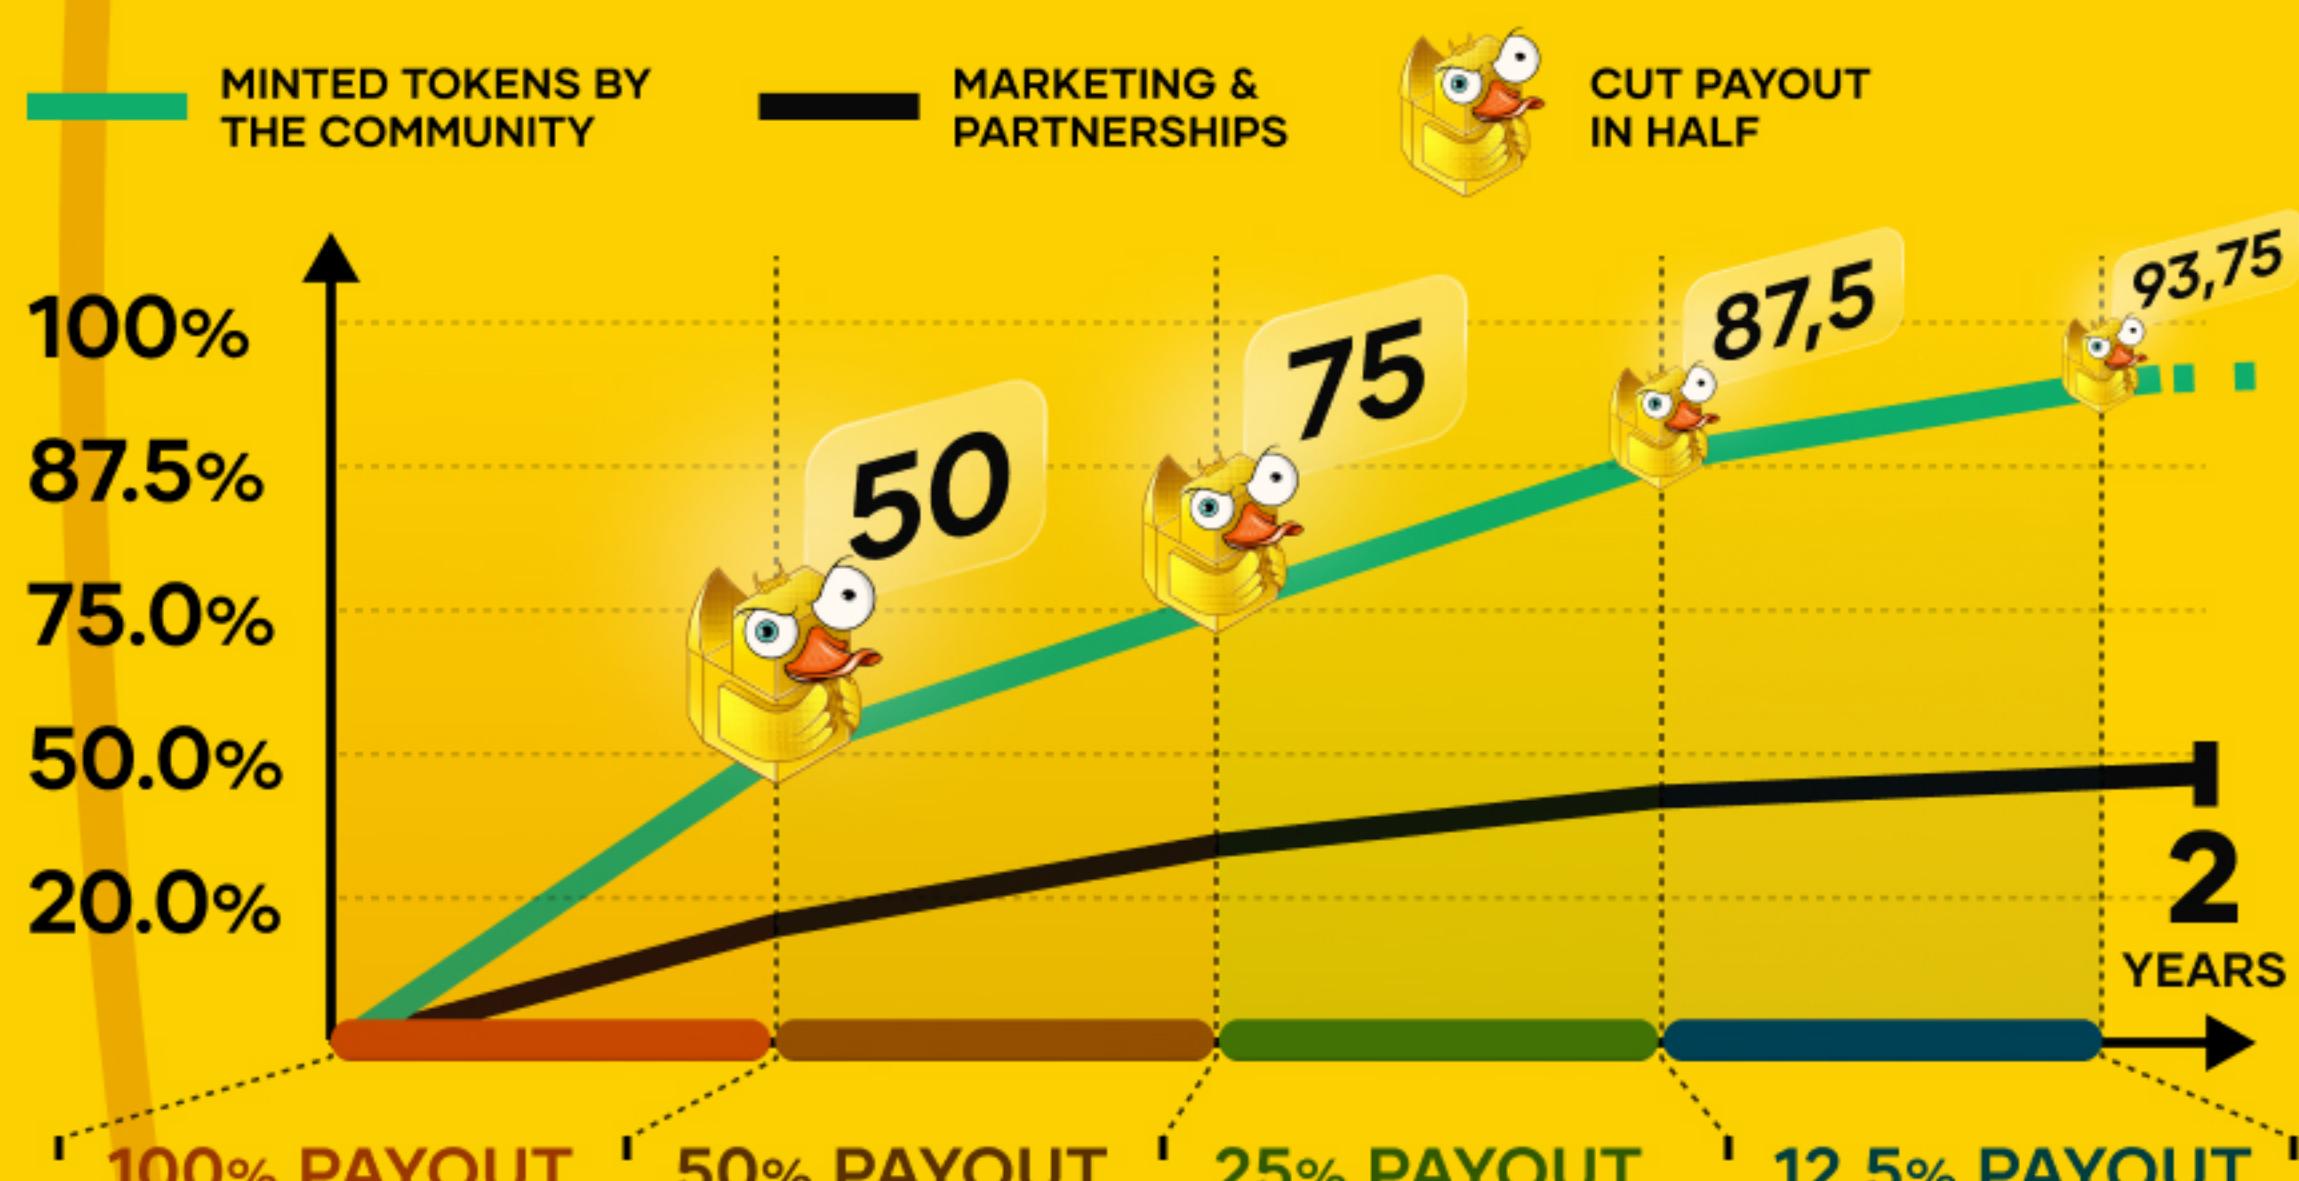

## Quests for DUCKIES

Quests are the bread and butter of Duckies. You get \$DUCKIES as a reward for completing each quest. If you have a team of invitees, you can also claim bonuses for all quests they complete.

## Commission Payout Halving

The Duckies halving is when the reward for referral mining is cut in half. Halving takes place when token supply reaches a specific threshold. The halving policy counteracts inflation by maintaining scarcity while the gameplay supports deflation.

## Duplicate Account Prevention

Duckies platform has a strict banning system and applies the Proof of Liveness. All fraudulent accounts will be suspended, and their respective balances will be burned.

## NFT Burns Token

Duckies have truly exclusive digital art & hand-drawn NFTs in various limited collections, that can be resold, transferred, gifted, swapped, and give special abilities on the platform.

## Burn-to Redeem Algorithm

Any redeem NFT action burns your token with a price set according to up-to-date marketing conditions such as remaining supply.

## Legendary NFTs

Apart from being awesome, Legendary Duckies NFTs have a one-time magic super power to “duck” your fellas (and mess up their plans!) like:

- Burn tokens from a targeted wallet (or ALL!)
- Freeze wallets for a period of time
- Clone/steal NFT of your choice
- Protect your wallet from “ducking”

## Governance

Duckonomics is defined by a lot of parameters such as reward size, payout amount, target supply, magic NFTs, etc. which is governed by a DAO. Any community member can bring forward proposals for the Duckies community to vote on. Anyone can initiate a vote and contribute to the project.
