Typography

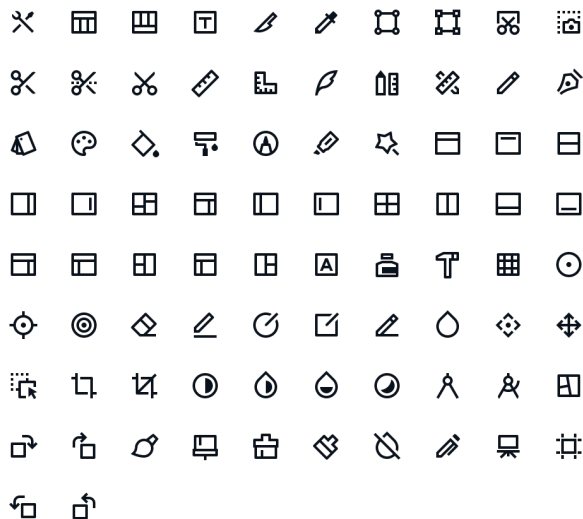

Playfair (regular)- For Titles

Poppins (regular)- For subtitles

Poppins (light) - for content

Iconography

Design

Filled icons are often used to represent an active or selected state, while outline icons are commonly used to represent an inactive or unselected state.

Filled icons are visually bold and provide a clear indication of an action that has been taken, while outline icons are more subtle and can be used to indicate options that are available but have not yet been selected. Both filled and outline icons have their own advantages and can be used effectively depending on the context and the desired user experience.
